Dear Tosh,

I have received provisional specs. of my lab from the architect. These were apparently drawn up before my plans were transmitted (through you) to him. Should I send those back completed or will he send me modified ones based on the sketch I've already sent?

Will there be grad. &/or med. student working space for the genetics dept. other than in our labs? I.e., should I definitely plan on having someplace in my lab for such people? I have the intention of keeping Cann in my lab. ~~The~~

There were a number of questions still to be answered in my correspondence with you before you left for Europe. When you have the time, I'd appreciate the answers.

Yours,

Len
